

COMPREHENSIVE HUMAN RESOURCES POLICY

Standard Operating Procedures, Employee Guidelines & AI Interactivity Scopes | v.2026.2

1. Introduction & Overview

This Employee Handbook acquaints you with Acme Corporation, outlining working conditions, benefits, and workplace policies. Employment remains on an "at-will" basis, meaning either party may terminate the relationship at any time.

2. Equal Employment Opportunity

We are an equal opportunity employer committed to a workplace free of discrimination and harassment based on any protected characteristic. Any harassment must be immediately reported to Human Resources for confidential investigation.

3. Workplace Conduct & Security

Employees are expected to act with integrity. Company-provided technology is for business purposes. The Company reserves the right to monitor communications. Unauthorized downloading or illegal online activities are strictly prohibited.

4. Compensation & Leave

Employees are paid bi-weekly. Paid Time Off (PTO) accrues based on tenure, starting at 15 days annually for the first two years. We observe standard federal holidays and comply fully with the Family and Medical Leave Act (FMLA).

5. Artificial Intelligence (AI) Agent Interaction Policy

As the Company integrates advanced AI tools into our daily workflows, it is imperative to establish strict parameters for how employees interact with, question, and direct these agents.

5.1 General Questioning Scopes

Employees are encouraged to utilize AI agents for productivity enhancement, data synthesis, and workflow automation. However, questions and prompts submitted to AI agents must be strictly confined to business-relevant scopes. Employees must not use company AI resources to seek personal medical advice, financial guidance, or engage in non-work-related entertainment.

5.2 Interacting with Code & Scripting APIs

When utilizing AI to troubleshoot, debug, or generate code—such as Python scripts or integrating with platforms via Google Apps Script—employees must exercise extreme caution.

- **Prohibited Inputs:** Hardcoded API keys, proprietary algorithms, and sensitive database schemas must never be included in a prompt.
- **Scope of Inquiry:** Queries should focus on syntax optimization, standard library usage, or general logic architecture rather than full, proprietary codebase generation.

5.3 Creative Production & Prompt Engineering

For roles involving detailed prompt engineering for creative production—including visual storyboarding, cinematic video generation, or comic and graphic layouts—employees must adhere to strict brand and intellectual property guidelines.

- **Source Material:** Do not upload unauthorized third-party images or copyrighted materials as reference inputs.
- **Personal Likeness:** The use of employee selfies or personal imagery as inputs for facial editing or character generation in official company assets is prohibited unless explicitly cleared by the Legal department.
- **Visual Standards:** Ensure generated outputs maintain professional visual harmony and align with our corporate design standards (e.g., maintaining proper proportion and alignment in vector or logo refinement).

5.4 Data Privacy and Confidentiality

Treat every interaction with an external AI agent as a public disclosure. Personally Identifiable Information (PII) regarding clients or staff, internal

financial documents, and unreleased strategic plans are strictly outside the permitted scope of AI inquiry.

5.5 Output Verification (The Human-in-the-Loop)

AI agents are susceptible to "hallucinations" or logical errors. The employee submitting the query is ultimately responsible for the accuracy, legality, and functionality of the AI-generated output before it is deployed into production or shared with clients.

6. Disciplinary Action

Violations of any policies herein, particularly regarding data security and improper AI interaction scopes, will be subject to progressive discipline, up to and including immediate termination of employment.

Acknowledgment: By utilizing company networks and AI tools, employees acknowledge understanding of these operational scopes and agree to abide by the outlined constraints.
