

StreamCut Pro User Guide

User Guide · Version 3.0

Document ID	XYZ-SCP-UG-3.0	Version	3.0
Document Type	User Guide	Approval Status	Approved
Owner	M. Alders, Product Documentation Lead	Department	Product Engineering — Media Tools
Audience	End User	Compliance Classification	Internal Use Only
Last Updated	June 2, 2025	Applies To	StreamCut Pro Desktop & Cloud 3.0.x (Windows/macOS/Web)
Taxonomy Tags	video-editing; ai-captioning; cloud-collaboration; gpu-render; template-marketplace	Keywords	AI captions, translation, cloud sync, real-time collaboration, 4K, 8K, GPU export, template marketplace

Summary

This guide documents StreamCut Pro 3.0, which adds AI-driven auto-captioning and translation, cloud project sync with real-time multi-user collaboration, GPU-accelerated 4K/8K export, and an in-app template marketplace. This release marks StreamCut Pro's transition from a purely local desktop tool to a hybrid desktop-and-cloud product.

- 11. Revision History

1. What's New Since Version 2.0

StreamCut Pro 3.0 is the largest capability jump in the product's history, moving beyond local single-user editing to a connected, AI-assisted, collaborative workflow.

- **AI Auto-Captioning:** automatic speech-to-text caption generation in 12 languages, with one-click translation.
- **Cloud Project Sync:** projects are stored in XYZ Cloud and can be opened from any licensed machine.
- **Real-Time Collaboration:** multiple editors can work in the same project simultaneously, similar to a shared document.
- **GPU-accelerated export** up to 8K resolution, using the render farm described in the companion SOP.
- **Template Marketplace:** a library of pre-built title, transition, and color templates, both XYZ-authored and community-submitted.

2. System Requirements and Setup

Cloud features require an active XYZ Cloud subscription tied to your corporate account and a stable internet connection of at least 10 Mbps upload for real-time collaboration. Local editing performance requirements are unchanged from 2.0.

3. AI Auto-Captioning and Translation

Auto-captioning uses XYZ's speech recognition service to generate a caption track directly on the timeline, which can then be edited like any other clip.

1. Select **Captions > Auto-Generate** on the sequence you want captioned.
2. Choose the source language; StreamCut Pro will detect it automatically if left blank.
3. Review and correct the generated captions in the **Caption Editor** panel.
4. Optionally select **Captions > Translate** and choose one or more of the 12 supported target languages to generate additional caption tracks.

4. Cloud Sync and Real-Time Collaboration

Cloud Sync stores the project file and a proxy copy of media in XYZ Cloud, while full-resolution source media remains referenced from each collaborator's local or shared storage.

- Enable **File > Cloud Sync** to publish a project for shared access.
- Invite collaborators by XYZ account email; permissions can be set to **Editor** or **Viewer**.
- Simultaneous edits to different tracks merge automatically; edits to the same clip are queued and flagged for the second editor to review.

5. GPU-Accelerated High-Resolution Export

Export now offers 4K and 8K options that route through GPU acceleration, either locally on a supported workstation GPU or via the cloud render farm for faster turnaround on large projects.

Resolution	Recommended Path	Typical Render Time (10 min sequence)
1080p	Local GPU or CPU	2-5 minutes
4K	Local GPU (8GB+ VRAM) or Cloud Render Farm	8-15 minutes

Resolution	Recommended Path	Typical Render Time (10 min sequence)
8K	Cloud Render Farm only	20-40 minutes

6. Using the Template Marketplace

The Template Marketplace, accessible from the Home screen, hosts titles, transitions, and color grading presets. XYZ-authored templates are marked Verified; community submissions display an author attribution and a peer rating.

- Browse or search the marketplace and click Apply to Project to import a template.
- Verified templates are covered by XYZ support; community templates are used at the editor's discretion.

7. Migrating from Version 2.0

2.0 projects open normally in 3.0 in local, non-synced mode. Enabling Cloud Sync on an existing project is optional and reversible; disabling sync retains a full local copy of the project as it stood at the time of the last sync.

8. Warnings & Constraints

⚠ Important Notices

- Real-time collaboration requires all participants to be on StreamCut Pro 3.0 or later; 2.0 and 1.0 clients cannot join a synced session.
- 8K export is only available via the Cloud Render Farm and consumes render-credit quota; see the SOP for quota and cost governance.
- Auto-generated captions are not guaranteed to meet accessibility compliance out of the box and must be reviewed before external publication — see Warnings in the companion SOP for QC requirements.
- Community-submitted marketplace templates are not security-scanned by XYZ Corporation beyond basic file-type validation; use Verified templates for client-facing deliverables where possible.
